Summary 2
Module 01: Vehicle Management 3
Module 02: Security Management 8
Module 03: Overseas Visa Management 12
Module 04: BGD Visa Management 17
Module 05: IL, BRL & Hotel Management 21
Module 06: Air Ticket Management 32
Module 07: Expats Apartment Management 35
Module 08: Office Administrative Management 38

Summary

Ambala IT will help you automate and streamline GA & Legal operations end-to-end by replacing scattered Excel trackers and manual follow-ups with a centralized, secure web-based platform that standardizes data entry, enforces maker/checker approval workflows, and maintains a single source of truth for every record.

Modules	Description
Vehicle Management	Vehicle profile, document validity tracking, maintenance & fuel logs, rental vehicle support, maker–checker approval, reporting & exports
Security Management	Security vendor & guard records, duty schedules, incident history, document repository, monthly reports
Overseas Visa Management	Country-wise requirements repository, checklist management, document templates, tracking & reporting
BGD Visa Management	Expat profile, visa/work permit/SC tracking, submission logs, expiry alerts, status dashboards
IL, BRL, Hotel Management	Hotel list, reservation tracking, booking copy upload, monthly cost reports & exports
Air Ticket Management	Travel schedule entry, ticket copy upload, vendor tracking, month-wise reporting
Expats Apartment Management	Apartment maintenance cost tracking, bill uploads, maintenance history, summary reporting
Office Administrative Management	Monthly expense tracking (electricity, rent, service charge, courier, diesel, etc.), bills upload, approval workflow, monthly summary reports

Module 01: Vehicle Management

Scope: The Vehicle Management Module is one of the core components of the GA & Legal Operations Management Software. It is designed to streamline the management and tracking of company-owned and rental vehicles. The goal is to replace the current fragmented approach (using spreadsheets or manual tracking systems) with an efficient, automated, and centralized system that ensures compliance, accountability, and operational efficiency.

Objective of the Vehicle Management Module

The primary goal of this module is to manage **company vehicles** and **rental vehicles** systematically, track essential vehicle-related data, and ensure timely renewals or maintenance through automated reminders and alerts. This module is designed to:

- Ensure compliance with all legal and operational requirements (e.g., vehicle registration, insurance, taxes).
- Track vehicle usage and expenses, improving cost control.
- Provide detailed reports on vehicle efficiency, maintenance, and downtime.

Core Features and Functionalities

The Vehicle Management Module will be divided into two sub-modules: Company Vehicle Management and Rental Vehicle / Covered Van Management.

A) Company Vehicle Management

This sub-module tracks every company-owned vehicle in the fleet, focusing on registration, insurance, maintenance, and operational status. The following features are included:

1. **Vehicle Profile Management**
    - **Information to track**:
        - Vehicle registration details (e.g., registration number, model, make, year, etc.).
        - Vehicle fitness details (validity of fitness certificates, inspection dates).
        - Vehicle insurance details (policy number, renewal dates).
        - Vehicle tax tokens (validity and renewal).
        - Driver information (name, license number, driving history).
        - Vehicle route/user information (which departments or individuals are assigned the vehicle, frequency of use).
    - **Business Goal**: Centralized data entry ensures that all relevant details about each vehicle are stored in one place for easy reference, and alerts are set for expiry tracking.
2. **Maintenance History**

- **Information to track**:
  - Type of maintenance (e.g., oil change, tire replacement, engine check).
  - Date of maintenance.
  - Workshop details (where maintenance took place).
  - Cost of maintenance.
  - Description of the maintenance performed.
  - Attachments (e.g., bills, receipts, invoices).
- **Business Goal**: Comprehensive tracking of vehicle maintenance helps manage vehicle longevity, prevent unplanned downtime, and identify cost trends related to maintenance.

3. **Fuel Consumption Tracking**
   - **Data to track**:
     - Mileage per vehicle.
     - Fuel consumption (liters per trip, or monthly/yearly).
     - Fuel costs.
     - Monthly fuel consumption comparison.
   - **Business Goal**: Fuel efficiency tracking provides insights into how efficiently each vehicle is being operated and helps identify vehicles with higher-than-average fuel costs, which could be a sign of inefficiency or misuse.
4. **Vehicle Inspection Checklist**
   - **Data to track**: A monthly inspection checklist that includes:
     - Checks for engine health, brakes, tires, lights, etc.
     - Inspection date.
     - Inspection results (pass/fail).
     - Corrective actions taken (if any).
   - **Business Goal**: Regular inspections help to identify potential issues before they cause breakdowns, reducing downtime and repair costs. It ensures vehicles are compliant with safety regulations.
5. **Accident History Tracking**
   - **Information to track**:
     - Date of the accident.
     - Nature of the accident.
     - Damage assessment.
     - Insurance claim status and details.
     - Costs incurred due to the accident (repairs, insurance).

        - Attachments (e.g., photos of damage, accident reports).
    - **Business Goal**: A clear record of accident history provides insights into the safety of the vehicle, enables insurance claims tracking, and helps reduce accident-related costs by monitoring patterns or recurring issues.

6. **Validity Expiry Alerts**
    - **Tracking Expiries**:
        - Vehicle fitness certificates.
        - Insurance.
        - Tax tokens.
        - Driver's licenses.
    - **Notifications**:
        - Proactive expiry notifications sent to the responsible user or fleet manager.
        - Customizable reminders at different timeframes (30, 60, 90 days before expiry).
    - **Business Goal**: Automated expiry alerts reduce the risk of legal violations, vehicle unavailability, and operational disruptions due to missing or expired documents.
7. **Reports**:
    - **Types of Reports**:
        - **Monthly/Yearly Maintenance Costs**: Report that aggregates all maintenance expenses by vehicle, allowing for trend analysis and cost control.
        - **Fuel Efficiency Summaries**: Reports that compare fuel consumption across vehicles, helping identify those that are underperforming or consuming too much fuel.
        - **Vehicle Downtime/Idle Tracking**: Provides insights into which vehicles are frequently out of service and why, helping to optimize fleet operations.
    - **Business Goal**: Reports help management make data-driven decisions regarding fleet management, maintenance planning, and vehicle replacements.

B) Rental Vehicle / Covered Van Management

This sub-module manages the rental or leased vehicles used by the company, such as covered vans or other types of transport hired temporarily or regularly. The following features are included:

1. **Vendor Details + Agreement Attachment**

- **Tracking Information**:
  - Vendor details (company name, contact, contract duration).
  - Rental agreement (start and end dates).
  - Agreement terms (cost, vehicle type, service inclusions).
- **Business Goal**: Ensuring that the company has all relevant information about the rental agreement and vendor is crucial for managing costs, renewing contracts, and ensuring the best pricing.

2. **Vehicle Profile + Driver Information**
   - **Information to Track**:
     - Vehicle details (similar to company vehicle profile).
     - Driver details for the rental vehicle (if applicable).
   - **Business Goal**: Ensures accountability for the rental vehicles and ensures the same level of oversight for rented vehicles as for company-owned ones.
3. **Document Status Tracking**
   - **Tracking Information**:
     - Vehicle-related documents (fitness, tax, insurance).
     - Any required permits for routes or operations.
   - **Business Goal**: Keeping track of rental vehicle documentation ensures compliance and avoids penalties for operating without the proper papers.
4. **Safety/Seat Belt Checklist + Incident History**
   - **Information to Track**:
     - Safety equipment (seat belts, fire extinguishers, etc.).
     - Incident history or accidents during the rental period.
   - **Business Goal**: Monitoring safety and incident history for rented vehicles ensures the company's responsibility for any issues during the rental period is clear, helping with insurance claims or liability.
5. **OT (Overtime) Summary + Fuel Amount Summary Reporting**
   - **Data to Track**:
     - Overtime hours worked by the driver (if applicable).
     - Fuel costs associated with the rental vehicle.
   - **Business Goal**: Helps the company track additional charges for rental vehicles (e.g., overuse of vehicle, fuel surcharges), and ensures that all rental expenses are monitored and controlled.

Business Value of the Vehicle Management Module

The **Vehicle Management Module** provides significant business value through several key advantages:

1. **Efficiency**: It centralizes all vehicle-related data (ownership, maintenance, insurance, fuel usage) in one system, reducing the need for manual tracking or reliance on multiple spreadsheets.
2. **Cost Control**: The tracking of fuel efficiency, maintenance costs, and vehicle downtime allows for better management of operational expenses. The company can identify vehicles that are becoming cost-ineffective and take action (e.g., replacement or increased maintenance).
3. **Compliance**: Proactively managing vehicle document expirations (e.g., insurance, fitness certificates, driver's license) ensures that the company complies with local and national regulations, avoiding fines or penalties.
4. **Reporting and Insights**: The module provides comprehensive reporting on vehicle performance, maintenance costs, and other key metrics, empowering management with actionable insights to optimize the fleet and reduce operational inefficiencies.
5. **Risk Management**: Tracking accidents and incidents, along with safety checks, helps mitigate risks and improve the overall safety of the fleet.
6. **Automated Reminders**: Automated expiry reminders for key documents reduce the chances of overlooking important renewals, ensuring business continuity and reducing the risk of operational disruptions.

Conclusion

The Vehicle Management Module will streamline vehicle operations, ensure compliance, and enable cost-effective management of both owned and rented vehicles. By automating tracking, maintenance, fuel usage, document expiry, and reporting, the system will provide significant time savings, reduce human errors, and improve decision-making for the fleet managers and senior management.

Module 02: Security Management

Scope: Security vendor & guard records, duty schedules, incident history, document repository, and monthly reports.

1. Purpose
The **Security Management** module is designed to manage and track all security-related activities, personnel, vendors, and incidents. It provides a centralized system to store security company profiles, personnel records, duty schedules, training documents, and incident history. The module will also automate the reporting process, providing real-time insights into security operations.

2. Business Background
Security management tasks are often performed manually, leading to fragmented data across multiple systems:

- Security personnel details and incident history are stored separately.
- Duty schedules and training documents are managed inconsistently.
- Incident tracking and reporting are time-consuming and error-prone.

The **Security Management** module will centralize all these operations, improving transparency, accountability, and compliance.

3. Business Objective
The main objectives of the **Security Management** module are:

- **Centralize security data**: Maintain a single repository for vendor and personnel records, duty schedules, and incident history.
- **Track security incidents**: Ensure that all incidents are recorded, categorized, and monitored.
- **Improve reporting**: Generate actionable reports for security management, training activities, and incidents.
- **Enhance compliance**: Maintain complete records of security training, personnel, and incidents to ensure regulatory compliance.

4. Scope

- **Security Company Profile Management**: Maintain detailed profiles of all security vendors, including contracts, terms, and contact information.
- **Security Personnel Management**: Track detailed records for all security guards, including assignments, training, and certifications.
- **Duty Schedule Tracking**: Create and manage duty schedules for security personnel.

- **Incident History Management**: Track all security-related incidents, including descriptions, actions taken, and resolution status.
- **Training Document Management**: Store monthly meeting and training documents for security personnel.
- **Reporting**: Generate monthly reports on incidents, personnel performance, and training.

5. Business Process Overview

Step 1: Security Vendor Profile Creation

- The system will maintain a detailed profile for each security vendor, which includes:
  - Company name, contact details, service level agreements (SLA), and contract details.

Step 2: Security Personnel Management

- Each security guard will have a profile with:
  - Name, training records, certifications, and assignment history.
  - Document management for personnel-related records (e.g., ID, contracts, training certifications).

Step 3: Duty Schedule Management

- The system will allow users to create and manage duty schedules for security guards, ensuring that the right personnel is assigned at the correct times.

Step 4: Incident Reporting and Tracking

- Security incidents will be logged with:
  - Incident description, time, location, actions taken, and resolution.
  - Attachments such as photos, reports, or investigation documents.

Step 5: Training and Monthly Meetings

- Store documents related to training sessions and meetings for security personnel.
  - Ensure that training schedules, attendance, and content are recorded.

Step 6: Reporting and Dashboards

- Generate reports on:
  - Incident history, personnel assignments, training completion, and more.
  - Dashboard views for real-time monitoring of security performance and incidents.

6. Detailed Business Requirements

BR-SM-01: Security Company Profile Management

- The system shall maintain detailed profiles for all security vendors, including:
  - Company name, contact information, contract terms, and service level agreements (SLA).

BR-SM-02: Security Personnel Profile Management

- The system shall allow creation and management of security guard profiles, including:
  - Personal details, training and certification records, and duty assignments.
  - Document attachments for IDs, contracts, and certifications.

BR-SM-03: Duty Schedule Management

- The system shall allow users to create, view, and edit duty schedules for security personnel, ensuring appropriate coverage at all times.
    - The duty schedule shall include shift timings, personnel assigned, and areas covered.

BR-SM-04: Incident History Management

- The system shall track and manage all security-related incidents, including:
    - Incident description, location, time, actions taken, and resolution status.
    - Document and media attachment support (e.g., photos, reports).

BR-SM-05: Monthly Training/Meeting Document Storage

- The system shall store monthly training and meeting documents for security personnel, including:
    - Training content, attendance logs, and evaluation reports.

BR-SM-06: Generate Reports

- The system shall generate monthly and annual reports, including:
    - **Incident History Report**: Summarizes security incidents, responses, and resolutions.
    - **Personnel Performance Report**: Tracks performance and compliance of security personnel.
    - **Training Summary Report**: Provides a record of completed training and certifications.

BR-SM-07: Role-Based Access Control

- The system shall enforce role-based access, ensuring that only authorized personnel can view or update security records.

7. User Roles and Permissions

- **Admin**: Configures system settings, manages user roles, and generates all reports.
- **Security Coordinator**: Enters and updates security personnel, vendor details, schedules, and incident reports.
- **Manager**: Reviews incident reports, duty schedules, and training records, and approves records.
- **Viewer**: Views reports and records but cannot make changes or uploads.

8. Data Requirements

- **Vendor Data**: Vendor name, contact information, contract terms, SLA.
- **Personnel Data**: Name, contact information, training records, certification details, duty schedules.
- **Incident Data**: Incident description, time, location, resolution, attachments.
- **Training Data**: Training content, attendance logs, certification details.

9. Business Rules

- **BR-SM-01**: All security vendors must have a complete and valid profile before being assigned to tasks.
- **BR-SM-02**: Security personnel must be assigned to a duty schedule with proper documentation and training.
- **BR-SM-03**: All incidents must be recorded with complete details and tracked until resolution.
- **BR-SM-04**: Reports must be generated monthly and should include incident summaries, training summaries, and personnel performance.

10. Reporting Requirements

- **Incident History Report**: A report showing all recorded incidents, including their status and resolution.
- **Personnel Performance Report**: A report summarizing the performance of security personnel, including assigned duties and compliance with schedules.
- **Training Summary Report**: A report detailing the completion of required training sessions for security personnel.

Module 03: Overseas Visa Management

Scope: Country-wise requirements repository, checklist management, document templates, tracking & reporting.

1. Purpose

The **Overseas Visa Management** module aims to streamline the process of tracking and managing visas for expats and employees. The module will help automate the management of country-specific visa requirements, document checklists, submission tracking, and reporting. It will centralize information, reduce duplication, and ensure timely compliance with visa expiration and renewal dates.

2. Business Background

Currently, the management of visa processes relies heavily on manual tracking, spreadsheets, and email communication. This leads to several challenges:

- Difficulty in tracking document requirements and status updates for multiple countries.
- Manual handling of visa renewal, submission, and expiry processes.
- Lack of centralized repository for visa documents.
- Inconsistent reporting and difficulty tracking the status of pending or approved visa applications.

The **Overseas Visa Management** module will replace these fragmented processes with a centralized and automated system, improving efficiency, compliance, and reporting.

3. Business Objective

The key objectives of the Overseas Visa Management module are:

- **Centralize visa-related data**: Maintain a single source of truth for all visa-related data, including requirements, status, and documents.
- **Automate document and visa tracking**: Provide automated reminders for visa renewals, expirations, and submissions.
- **Streamline workflows**: Enable document submissions, approvals, and status updates to be tracked seamlessly.
- **Generate reports**: Create actionable reports that track the status of visa applications, submissions, approvals, and expirations.
- **Ensure compliance**: Help prevent visa-related compliance issues by offering a structured and timely approach to tracking.

4. Scope

- **Country-Wise Visa Requirements**: Maintain a repository of visa requirements for each country, categorized by year.
- **Document Checklist Management**: Track required documents for each country and visa type.
- **Visa Tracking**: Track the status of visas and related documents, including key dates such as visa expiry and renewal.
- **Alert System**: Set up automated alerts for visa expiration and submission deadlines.
- **Reporting**: Generate detailed reports on visa applications, statuses, and pending tasks.

5. Business Process Overview

Step 1: Visa Requirement Repository

- Each country's visa requirements and associated documents are entered and stored in the system. This includes document types, submission requirements, and country-specific rules.

Step 2: Document Checklist Management

- For each visa type, the system will track a checklist of required documents. Users can check off items as they are collected.

Step 3: Visa Tracking & Status Updates

- Track the status of visa applications and updates on submission and approval. The system will allow updates on:
    - Stamping call dates
    - Passport retrieval
    - Visa validity

Step 4: Alerts & Expiry Reminders

- Proactive expiry and submission reminders will be sent to the relevant personnel, ensuring no deadlines are missed.

Step 5: Reporting & Exports

- Monthly and annual reports will be generated to review the visa statuses, pending applications, and renewal timelines. Reports can be exported to Excel or PDF for management review.

6. Detailed Business Requirements

BR-OVM-01: Maintain Country-Wise Visa Requirements

- The system shall maintain a repository for country-specific visa requirements for each year.

    - This includes the types of documents required, visa category, and submission timelines.
    - The system shall support both historical and current country visa requirements.

BR-OVM-02: Document Checklist Management

- The system shall allow users to create and maintain a checklist for each country's visa process.
    - The checklist should be customizable to include all required documents such as passports, visa applications, appointment letters, etc.

BR-OVM-03: Visa Application Status Tracking

- The system shall allow tracking of the status of visa applications:
    - Submitted, Pending, Approved, Rejected.
    - The system shall track key dates for each visa (e.g., visa expiry date, stamping date).

BR-OVM-04: Expiry Alerts & Notifications

- The system shall send automated alerts for visa expirations:
    - Alerts for visa expiry (e.g., 30 days before expiry).
    - Reminders for pending submissions and approvals.

BR-OVM-05: Reporting & Export Functionality

- The system shall generate the following reports:
    - **Visa Submission Log**: Tracks all visa applications by date, approval, or rejection.
    - **Visa Expiry Report**: Provides an overview of upcoming visa expirations for proactive management.
    - **Pipeline Report**: Provides a report on submitted, pending, approved, and rejected visas.
    - **Expat Profile Report**: Generates detailed reports for expat visa management, including validity and status tracking.

BR-OVM-06: Document Attachment and Versioning

- The system shall allow attachments for each visa-related document (PDF, images, Word documents).
- Users will be able to upload, view, and version documents as required (e.g., passport scans, work permits).

7. User Roles and Permissions

- **Admin**: Manages country visa requirements, user roles, and permissions.
- **Visa Coordinator**: Inputs and updates visa applications, tracks status, uploads documents, and ensures the checklist is complete.
- **Manager**: Reviews visa statuses, approves document submissions, and generates reports.
- **Viewer**: Views visa data and reports but cannot make changes or update statuses.

- **Checker**: Verifies and checks the completeness of visa documents and status before final approval.

8. Data Requirements

- **Country Data**: Country name, visa types, document requirements, submission deadlines.
- **Visa Data**: Expat name, visa/work permit number, submission log, approval status, and key dates (expiry, stamping).
- **Document Data**: Passport copies, visa application forms, work permits, security clearance documents.
- **Alert Data**: Expiry date, notification reminders, action status.

9. Business Rules

- **BR-OVM-01**: A visa application must be associated with a specific country and must comply with that country's visa requirements.
- **BR-OVM-02**: Expats' visa profiles must be regularly updated to reflect accurate statuses and expiry dates.
- **BR-OVM-03**: Document status should be clearly marked (e.g., pending, completed, expired) in the system.
- **BR-OVM-04**: Automated expiry alerts should be configurable to allow reminders at varying timeframes (30, 60, 90 days).

10. Report Requirements

- Visa Submission Log Report
  - Tracks submission status (submitted, pending, approved, rejected).
  - Includes submission date, applicant details, country, visa type, and status.
- Visa Expiry Report
  - Lists upcoming visa expirations.
  - Includes expat name, visa number, expiry date, and days remaining.
- Pipeline Report
  - Tracks visa application status (submitted, pending, approved, rejected).
  - Includes submission status and action required.
- Expat Visa Summary Report
  - Provides an overview of visa statuses for all expatriates.
  - Includes visa status, expiry date, and key dates.
- Visa Renewal Status Report
  - Tracks visa renewals and statuses.
  - Includes renewal status, approval date, and renewal deadlines.

- [ ] Security Clearance Status Report
  - Tracks security clearance status and expiry dates.
- [ ] Detailed Visa Tracking Report
  - Tracks visa progress (from submission to approval).
  - Includes submission date, approval status, and key dates.
- [ ] Actionable Tasks/Alerts Report
  - Lists visa actions (renewals, submissions) and deadlines.
  - Includes expat name, visa details, and actions due.

Module 04: BGD Visa Management

Scope: Expat profile management, visa/work permit/SC tracking, submission logs, expiry alerts, and status dashboards.

1. Purpose

The **BGD Visa Management** module is designed to automate and streamline the management of expatriates' visa, work permit, and security clearance (SC) processes. It will provide a centralized platform to track key visa-related data, automate reminders for renewals and expirations, and offer robust reporting features for management and compliance.

2. Business Background

Visa and work permit management for expatriates are currently handled manually or through disparate systems, leading to inefficiencies:

- Difficulty in tracking visa expiration dates and renewals.
- Lack of centralized tracking for expat visa profiles and documentation.
- Increased reliance on spreadsheets and manual updates, causing errors and delays.
- Limited visibility for management on the status of visa submissions, approvals, or rejections.

The **BGD Visa Management** module will replace manual tracking and improve the efficiency, accuracy, and compliance of visa management processes.

3. Business Objective

The key objectives of the **BGD Visa Management** module are:

- **Centralize visa management**: Maintain a single, up-to-date source for all expat visa, work permit, and SC data.
- **Automate tracking and reminders**: Ensure timely actions are taken through automated expiry alerts and submission reminders.
- **Improve visibility**: Provide real-time status dashboards and detailed reports on visa applications, submissions, and renewals.
- **Enhance compliance**: Ensure adherence to visa and work permit regulations through proper tracking and reporting.

4. Scope

- **Expat Profile Management**: Capture and maintain detailed profiles of expatriates, including visa/work permit details and related documents.
- **Visa/Work Permit Tracking**: Track visa and work permit statuses, expiry dates, and submission logs.

- **Security Clearance (SC) Management**: Track security clearance statuses and expiry alerts.
- **Submission Logs and Pipeline Reporting**: Record and report on visa submissions, approvals, and rejections.
- **Expiry Alerts**: Provide automated alerts for visa and work permit renewals, SC renewals, and other related tasks.
- **Status Dashboards**: Real-time visibility into the status of visa applications, renewals, and document requirements.

5. Business Process Overview

Step 1: Expat Profile Creation and Updates

- Each expatriate will have a unique profile that includes:
    - Personal information (name, designation, etc.).
    - Visa/work permit details (number, expiry date, visa category).
    - Security clearance (SC) details.
    - Relevant documents (passport, visa, work permit copies).

Step 2: Visa and Work Permit Tracking

- The system will track visa and work permit applications, approvals, rejections, and renewals.
- Key dates such as stamping dates, passport retrieval, and visa validity will be tracked.

Step 3: Security Clearance Tracking

- Track SC applications, status, and expiry dates.
- Alerts for upcoming SC expirations will be generated.

Step 4: Visa Submission Log and Reporting

- Maintain a log of all visa and work permit submissions, including:
    - Submission date, approvals, and rejections.
    - Track the submission pipeline (submitted, pending, approved, rejected).

Step 5: Expiry Alerts and Notifications

- Automated expiry alerts will be sent for visa/work permit/SC renewals or upcoming deadlines.

Step 6: Reporting and Dashboards

- Generate reports based on submission status, approvals, expirations, and renewals.
- Exportable reports will be available in Excel/PDF formats for easy sharing with stakeholders.

6. Detailed Business Requirements

BR-BVM-01: Expat Profile Management

- The system shall allow users to create and manage expat profiles that include:
    - Personal and employment details.
    - Visa/work permit details and expiration dates.

    - Security clearance details.

BR-BVM-02: Visa and Work Permit Tracking

- The system shall track visa and work permit application statuses:
    - Submitted, Pending, Approved, Rejected.
    - Key dates for visas: stamping call date, passport retrieval date, visa valid until date.

BR-BVM-03: Security Clearance (SC) Tracking

- The system shall track SC applications, including:
    - Security clearance status (approved, pending, expired).
    - Expiry date for each SC, with automated reminders.

BR-BVM-04: Visa Submission Log

- The system shall maintain a submission log that tracks:
    - Submission date, approval status, country, and any related comments.
    - The status of each submission (e.g., submitted, pending, approved, rejected).
    - A log of actions taken for each submission, allowing for a complete audit trail.

BR-BVM-05: Pipeline Reporting

- The system shall generate reports based on the visa pipeline:
    - **Submitted**: All applications that have been submitted but not yet processed.
    - **Pending**: Applications awaiting approval.
    - **Approved**: Applications that have been approved.
    - **Rejected**: Applications that have been rejected.

BR-BVM-06: Expiry Alerts and Notifications

- The system shall provide configurable expiry alerts for:
    - Visa/work permit expirations (e.g., 30, 60, or 90 days before expiry).
    - Security clearance expiry.
- Alerts will be sent to the designated responsible user (e.g., HR or compliance team).

BR-BVM-07: Status Dashboards

- The system shall provide a real-time dashboard displaying the status of all visa applications, including:
    - The number of visas pending, approved, rejected, and expired.
    - Key upcoming deadlines and renewal dates.

BR-BVM-08: Reporting & Export Functionality

- The system shall generate reports such as:
    - **Visa Submission Summary**: A report detailing submission dates, approvals, and rejections.
    - **Visa Expiry Summary**: A report showing upcoming visa/work permit expirations.
    - **Expat Visa Status**: A report showing the current visa status of all expatriates.

BR-BVM-09: Document Management

- The system shall allow users to upload and maintain copies of relevant documents (passport, visa, work permit, SC certificate).
- All documents must be attached to the respective expat's profile for easy retrieval.

7. User Roles and Permissions

- **Admin**: Can configure system settings, manage user roles, and generate all reports.
- **Visa Coordinator**: Enters and updates visa/work permit/SC information, tracks status, uploads documents.
- **Manager**: Reviews visa statuses, approves/rejects submissions, and generates reports.
- **Viewer**: Views visa data and reports but cannot make changes.
- **Compliance Officer**: Monitors visa renewals and expiration deadlines, ensuring compliance.

8. Data Requirements

- **Expat Profile Data**: Name, designation, passport number, work permit details, SC details, visa expiry date.
- **Visa Data**: Submission date, visa number, approval status, stamping call date, passport retrieval date.
- **SC Data**: SC application status, expiry date, and approval status.
- **Document Data**: Passport, visa/work permit copies, SC certificates.
- **Alert Data**: Expiry dates, alert configurations, recipient details.

9. Business Rules

- **BR-BVM-01**: A visa application must be linked to a valid expat profile and cannot be processed without complete data.
- **BR-BVM-02**: Expiry alerts must be configurable for visa/work permit renewals.
- **BR-BVM-03**: Submission logs must be maintained for all visa applications, with clear status tracking.
- **BR-BVM-04**: Visa expiration alerts must be sent at least 60 days before the expiry date.

10. Reporting Requirements

- **Visa Submission Summary**: Report on submission dates, approval status, and submission country.
- **Visa Expiry Summary**: List of visas/work permits/SC with upcoming expiry dates.
- **Expat Visa Status Report**: Status overview of all expats' visas, with expiration dates and renewal alerts.

Module 05: IL, BRL & Hotel Management

Focus Scope: Hotel List, Reservation Tracking, Booking Copy Upload, Monthly Cost Reports & Exports

1. Purpose

This BRD defines the business requirements for the Hotel Management part of the IL, BRL & Hotel Management module. The purpose is to help the software development team understand the business process, required data, user roles, workflow, reporting needs, and control requirements for managing hotel reservations related to visitors/guests.

This BRD focuses mainly on:

- hotel master list,
- reservation entry and tracking,
- booking copy upload,
- bill and bill status tracking,
- monthly cost reports,
- exportable summaries.

The BRD also preserves the business linkage between IL, BRL, and Hotel Reservation, because the uploaded Excel shows that these activities share the same visitor information and operate as one visitor-management flow.

2. Business Background

At present, visitor-related hotel coordination is being managed through Excel sheets, email requests, booking files, and manually maintained summaries. This causes several business problems:

- visitor information is entered repeatedly across IL, BRL, and hotel-related files,
- booking copies and supporting files are stored in scattered locations,
- it is difficult to know the latest reservation status,
- hotel costs are not consolidated automatically,
- bill tracking is manual,
- month-wise reporting takes time,
- management does not have instant visibility into hotel usage and spending,
- operational continuity depends too much on individual staff members.

The Excel file shows that the business really works in three layers:

1. **Request layer**
   New visitor entry or selection from an existing visitor list.
2. **Operational input layer**
   Shared visitor details are captured once and then used for IL, BRL, and hotel actions.
3. **Summary/report layer**
   Booking files, bills, and status are stored for reporting and control.

3. Business Objective

The objective of this module is to provide a centralized, secure, and searchable system to manage hotel reservations for visitors by:

- maintaining a hotel list in one place,
- reducing duplicate entry through a shared visitor record,
- tracking reservation status from request to completion,
- storing booking soft copies and related files,
- tracking bill receipt and bill status,
- generating monthly cost reports,
- enabling Excel/PDF export,
- supporting accountability through access control and audit history.

4. Scope

- Hotel master list
- New visitor reservation entry
- Existing visitor reuse for reservation creation
- Reservation tracking
- Booking copy upload
- Storage of supporting files
- Bill upload
- Bill status tracking
- Month-wise and year-wise reporting
- Hotel cost summary reporting
- Export to Excel and PDF
- Search and filter
- Role-based access and audit log
- Linkage between hotel reservation and related visitor/IL/BRL record

5. Stakeholders

The main business stakeholders for this module are:

- GA & Legal team
- Admin / Visitor coordination team
- Hotel booking / travel support team
- Finance / accounts team
- Department PIC for visitor
- Management / approvers

6. Business Users and Roles

The system should support at least the following business roles:

Admin

Can configure master data, users, permissions, and reporting access.

Input User

Creates and updates visitor and hotel reservation records, uploads booking copies and bills.

Checker

Verifies reservation data, file completeness, and billing information before records are finalized.

Viewer

Can view records and download permitted reports but cannot edit.

Management

Can view summaries, monthly cost reports, dashboard-style overviews, and exports.

7. Business Process Overview

The intended business flow for this module should be:

Step 1: Visitor identification

A user creates a **new visitor entry** or selects an **existing visitor** from the visitor list.

Step 2: Shared visitor information capture

The system captures or retrieves the core visitor data once. This shared information may be used for IL, BRL, and hotel reservation activities.

Step 3: Hotel reservation entry

The user enters the hotel-related details such as hotel name, room category, rate, payment responsibility, stay period, remarks, and transport requirement.

Step 4: Booking communication and file upload

Once booking is sent to the hotel and confirmation is received, the user uploads the reservation/booking soft copy.

Step 5: Stay completion and bill recording

After or during completion of the stay, the hotel bill is uploaded and its status is updated.

Step 6: Review and reporting

The record becomes available for summary/report generation, monthly cost analysis, and export.

8. Detailed Business Requirements

BR-HM-01: Maintain Hotel Master List

The system shall maintain a centralized Hotel Master List.
The hotel master should store at minimum:

- hotel name,
- active/inactive status,
- basic operational reference details.

The system should also support configurable value lists related to hotel reservation, such as:

- room category,
- smoking/non-smoking,
- payment type.

The Excel file suggests hotel names and room categories are used as structured choices, so these should not be hardcoded in multiple places.

BR-HM-02: Support New Visitor Entry and Existing Visitor Reuse

The system shall allow users to create a hotel reservation for either:

- a new visitor, or
- an existing visitor already available in the system.

This is important because the current Excel clearly distinguishes New Visitor Entry and Existing Visitor List.
The main business goal is to avoid duplicate entry and ensure that the same visitor data can support IL, BRL, and hotel activities.

BR-HM-03: Shared Visitor Record

The system shall maintain a shared visitor record that can be linked to hotel reservation transactions.
Based on the uploaded Excel, the shared visitor information should support at least:

- visitor name,
- passport number,
- designation,
- department,
- organization/company details (current Excel labels include “C Name” and “C Address”),
- country name,
- PIC for visitor,
- travel period,
- purpose of visit.

This shared structure is important because the hotel process is not independent from the visitor process.

BR-HM-04: Create and Maintain Hotel Reservation Records
The system shall allow users to create, edit, review, and view hotel reservation records linked to a visitor.
Each hotel reservation record should support at least:

- reservation reference number,
- reporting year,
- reporting month,
- linked visitor,
- hotel name,
- check-in date,
- check-out date,
- remarks,
- reservation status.

The reservation record should remain searchable and reportable throughout its lifecycle.

BR-HM-05: Capture Hotel-Specific Reservation Details
The system shall capture hotel-specific fields reflected in the existing Excel structure, including:

- hotel name,
- room category,
- room rate,
- smoking/non-smoking requirement,
- payment responsibility: guest or company,
- airport pickup requirement,
- airport drop requirement,
- flight name for pickup,
- flight time for pickup,
- flight name for drop,
- flight time for drop.

The workbook shows that transport coordination is part of the reservation process, so this must be treated as part of business scope, not as an afterthought.

BR-HM-06: Upload and Store Booking Copy
The system shall allow users to upload the **booking confirmation / reservation soft copy** for each reservation record.
Business need:

- keep proof of reservation,
- allow quick access during coordination,
- support review and audit,
- reduce dependency on email search.

The booking copy should remain linked directly to the reservation record.

BR-HM-07: Upload and Track Bill
The system shall allow users to upload the related **hotel bill** against each reservation.
The reservation record shall support:

- bill attachment,
- bill status,
- bill remarks if needed.

The Excel file explicitly contains **Bill** and **Bill Status** in the summary/report section, so billing control is part of the required business process.

BR-HM-08: Maintain Reservation and Billing Status
The system shall support separate business status tracking for:

1. reservation progress,
2. billing progress,
3. workflow/checking progress.

This should be separated instead of using one generic status field.
Recommended minimum statuses are:
Reservation status

- Draft
- Submitted
- Sent to Hotel
- Confirmed
- Completed
- Cancelled

Billing status

- Not Received
- Received
- Verified
- Closed
- Not Applicable

Workflow status

- Draft
- Submitted
- Checked
- Approved

This structure aligns the hotel process with the overall software concept of Input → Checking → Report, while preserving the real operational flow.

BR-HM-09: Search, Filter, and Retrieval
The system shall allow users to search and filter reservation records by:

- year,
- month,
- hotel name,
- visitor name,
- passport number,
- country,
- department,
- PIC,
- reservation status,
- bill status,
- payment type.

This is necessary to support operational follow-up and fast reporting.

BR-HM-10: Summary and Monthly Reporting

The system shall generate summary views and monthly reports for hotel reservations.
At minimum, the system shall provide:

- monthly reservation summary,
- monthly hotel cost summary,
- hotel-wise reservation count,
- hotel-wise monthly spend,
- bill status summary,
- visitor-wise reservation history,
- reservation list by month.

These reports should support both operational review and management review.

BR-HM-11: Export to Excel and PDF

The system shall allow users to export reservation summaries and cost reports to:

- Excel,
- PDF.

Exports should be available with applied filters so users can generate:

- month-wise reports,
- year-wise reports,
- hotel-wise reports,
- status-based reports.

BR-HM-12: Linked Record View

The system shall support linkage between the hotel reservation and related visitor documents/records.
Where applicable, users should be able to see or access linked items such as:

- source data file,

- source email attachment,
- passport copy,
- other related visitor documents,
- related IL/BRL reference.

This requirement comes from the logic of the Excel sheet, where summary data and documents are kept together for visitor processing.

BR-HM-13: Transport Coordination Support

Where airport pickup or drop is required, the system shall capture the relevant transport information and make it available for operational coordination.

The system should support advance notification or clear visibility for:

- arrival pickup,
- departure drop,
- flight name,
- flight time.

This is directly aligned with the hotel reservation instructions shown in the source materials.

BR-HM-14: Role-Based Access

The system shall enforce role-based access so that only authorized users can:

- create reservations,
- edit records,
- upload or replace files,
- verify bills,
- approve records,
- view management reports.

This is consistent with the broader software concept and with the control notes in the spreadsheet about role-based access.

BR-HM-15: Secure File Storage

The system shall store reservation-related files in a secure and structured way.

Files must be linked to the reservation record so users do not need to search across email or personal folders.

This includes:

- booking copy,
- bill copy,
- supporting visitor files where relevant.

BR-HM-16: Audit Trail

The system shall maintain an audit log showing:

- who created the record,

- who edited the record,
- what changed,
- when the change happened,
- who uploaded or replaced files,
- who checked/approved the record.

This is important for accountability and business control.

BR-HM-17: Performance and Scale

The system shall support efficient filtering, reporting, and retrieval even when reservation records grow over time.

The uploaded Excel includes performance/scale thinking, so the solution should be designed to handle growing datasets with saved filters, fast search, and report generation.

9. Business Data Required

The following data groups are required for this module.

A. Visitor data

- Visitor name
- Passport number
- Designation
- Department
- Organization/company name
- Organization/company address
- Country
- PIC for visitor
- Travel start date
- Travel end date
- Purpose of visit

B. Reservation data

- Reservation ID
- Year
- Month
- Hotel name
- Check-in date
- Check-out date
- Room category
- Rate
- Smoking/non-smoking
- Payment type
- Remarks
- Reservation status

C. Transport data

- Pickup required
- Pickup flight name
- Pickup time
- Drop required
- Drop flight name
- Drop time

D. Document data

- Booking copy
- Bill copy
- Source file/email reference
- Linked passport copy if applicable
- Related IL/BRL reference

E. Billing data

- Bill status
- Bill received date
- Bill remarks
- Closing status

10. Business Rules

The following business rules should apply:

1. A hotel reservation must be linked to a visitor record.
2. Existing visitor records should be reusable to avoid duplicate entry.
3. Check-out date cannot be earlier than check-in date.
4. If airport pickup is marked "Yes," pickup flight information should be required.
5. If airport drop is marked "Yes," drop flight information should be required.
6. Booking copy should become mandatory once a reservation is confirmed.
7. Bill status cannot move to a closed/verified state unless a bill file exists, unless the booking is marked not applicable.
8. Payment type must distinguish Guest Paid and Company Paid.
9. Monthly cost reporting should primarily reflect Company Paid bookings, while Guest Paid bookings should remain visible for operational tracking.
10. Deleted records should not be permanently removed without audit visibility; business prefers traceability.

11. Reports Required

The most important required reports are:

1. Monthly Hotel Reservation Summary

Shows all reservations for a selected month with hotel, visitor, dates, status, and files.

2. Monthly Hotel Cost Report

Shows total hotel cost for the selected month, ideally broken down by:

- hotel,
- visitor,
- department,
- payment type,
- bill status.

3. Hotel-Wise Spend Report

Shows how much was spent per hotel in a selected month or year.

4. Bill Status Report

Shows reservations where:

- bill not received,
- bill received,
- bill verified,
- bill closed.

5. Visitor-Wise Reservation History

Shows the hotel reservation history for a selected visitor.

6. Exportable Reservation List

Filtered list exportable to Excel or PDF.

Module 06: Air Ticket Management

Scope: Travel schedule entry, ticket copy upload, vendor tracking, month-wise reporting.

1. Purpose

The **Air Ticket Management** module aims to centralize and automate the process of managing air travel schedules, booking entries, and related documentation. The goal is to improve efficiency, ensure accuracy, and streamline reporting related to travel and vendors.

2. Business Background

Currently, air travel coordination is handled through a mix of manual entry and spreadsheet tracking. This approach results in:

- Difficulty in tracking ticket booking status.
- Lack of centralization for travel data and related documents.
- Slow reporting processes.
- Heavy reliance on specific personnel for operational continuity.

The new system will centralize travel data, ensure timely entries, and provide instant reporting capabilities.

3. Business Objective

The objective is to automate air ticket management by:

- Capturing travel schedules (including passenger and flight details).
- Uploading and storing ticket soft copies.
- Tracking and reporting by month, vendor, and destination.
- Generating detailed reports and providing exports to Excel/PDF.
- Streamlining vendor and travel schedule management with role-based access and audit logs.

4. Scope

- **Travel Schedule Entry**: Users can enter travel schedules with passenger names, flight details, and vendor information.
- **Ticket Copy Upload**: Upload soft copies of the air tickets associated with each travel schedule.
- **Vendor Tracking**: Track and manage vendor details associated with air travel.
- **Month-Wise Reporting**: Generate reports based on travel schedules by month, vendor, and destination.
- **Export to Excel/PDF**: Export reports for operational and management reviews.

5. Business Process Overview

Step 1: Travel Schedule Entry

- Users will input detailed travel schedules, including:
  - Passenger names.
  - Flight details (departure, arrival).
  - Vendor details.

Step 2: Ticket Upload

- Upon confirmation of travel bookings, users will upload soft copies of air tickets.

Step 3: Vendor and Travel Details Management

- Ensure that the travel schedule is linked to the respective vendor and includes all required details for cost and service tracking.

Step 4: Reporting and Export

- The system will generate month-wise and destination-based reports, including ticket details, vendor costs, and more.

6. Detailed Business Requirements

BR-AT-01: Capture Travel Schedule Information

- The system shall allow users to enter the following travel schedule details:
  - Passenger name
  - Flight details (departure, arrival)
  - Vendor name and details

BR-AT-02: Upload Ticket Copies

- The system shall support uploading soft copies of the air ticket for each scheduled entry.

BR-AT-03: Vendor Tracking

- The system shall maintain a record of the vendor associated with each travel schedule, including:
  - Vendor name.
  - Contact information.
  - Contract details (if applicable).

BR-AT-04: Month-Wise Reporting

- The system shall generate reports based on:
  - Month of travel.
  - Vendor.
  - Destination.
  - Flight details.

BR-AT-05: Search and Filter

- Users should be able to search and filter by:
  - Month, year, vendor, destination, passenger name, and flight details.

BR-AT-06: Export to Excel/PDF

- The system shall allow users to export the generated reports to Excel or PDF format for analysis.

7. Business Rules

- **BR-AT-01:** A travel schedule must have a linked ticket copy to ensure proof of booking.
- **BR-AT-02:** A travel schedule must be associated with a valid vendor.
- **BR-AT-03:** Reports should reflect only completed and confirmed travel schedules.
- **BR-AT-04:** Ticket and travel details should be available for export to ensure proper documentation.

8. User Roles and Permissions

- **Admin**: Configures system settings, manages user roles, and generates reports.
- **Input User**: Enters travel schedules and uploads ticket copies.
- **Checker**: Verifies travel data and ensures that all required information is complete before final submission.
- **Viewer**: Views travel records and reports but cannot edit or upload data.
- **Management**: Views summarized reports and exports data for analysis.

9. Reporting Requirements

- **Monthly Travel Summary**: A report that aggregates travel data for the selected month, showing flight details and vendor costs.
- **Vendor-Wise Cost Summary**: A report that shows costs per vendor, helping identify spending patterns and potential areas for cost control.
- **Destination-Wise Report**: A report based on the travel destination to analyze trends and frequency of travel.

10. Data Requirements

- **Passenger Data**: Name, travel dates, and related details.
- **Ticket Data**: Ticket number, flight details, and soft copy of the ticket.
- **Vendor Data**: Vendor name, contact details, and contract terms.
- **Cost Data**: Vendor costs, including any additional fees, OT charges, or discounts.

Module 07: Expats Apartment Management

Scope: Apartment maintenance cost tracking, bill uploads, maintenance history, summary reporting.

1. Purpose
The **Expats Apartment Management** module is designed to efficiently track and manage all maintenance-related activities and associated costs for expat apartments. The system centralizes apartment profiles, tracks maintenance work, stores bills and receipts, and generates cost summaries for better management and cost control.

2. Business Background
Currently, apartment maintenance costs and related tasks are tracked manually, leading to inefficiencies and errors:

- Maintenance history is scattered across different documents.
- Lack of centralized cost tracking and reporting.
- Difficulty in accessing and verifying bill details.

This module will automate apartment maintenance management by centralizing data, improving transparency, and providing instant access to key documents and reports.

3. Business Objective
The key objectives of this module are:

- **Centralize apartment data**: Maintain detailed profiles for each apartment, linking them to lease agreements.
- **Track maintenance costs**: Store detailed records of maintenance work, including costs and service providers.
- **Generate cost reports**: Provide reports on maintenance expenses and summaries of work done.
- **Improve document accessibility**: Ensure that all bills, receipts, and maintenance documents are stored and easily retrievable.

4. Scope

- **Apartment Profile Management**: Create and manage detailed profiles for each apartment.
- **Maintenance Cost Tracking**: Track maintenance expenses, including costs for repairs, services, and routine tasks.
- **Bill Upload and Storage**: Upload and store bills, invoices, and receipts related to maintenance.
- **Maintenance History Tracking**: Track past maintenance tasks, including descriptions, costs, and service providers.

- **Reporting**: Generate cost summary reports and maintenance work history reports.

5. Business Process Overview

Step 1: Apartment Profile Creation

- Each apartment will have a profile containing:
  - Apartment details (location, lease agreement, assigned expat).
  - Link to the lease agreement and related documents.

Step 2: Maintenance Cost Tracking

- The system will track maintenance activities, including:
  - Type of maintenance (repairs, cleaning, upgrades).
  - Costs associated with each activity (labor, parts, service provider).

Step 3: Bill Upload and Document Storage

- Users will upload bills and receipts for maintenance work, storing them alongside the related apartment profile.

Step 4: Maintenance History Tracking

- The system will maintain a history of all maintenance work done, including descriptions, service provider details, and expenses.

Step 5: Reporting and Exporting

- The system will generate reports, including:
  - Monthly and yearly maintenance cost summaries.
  - Detailed maintenance activity reports.

6. Detailed Business Requirements

BR-EAM-01: Apartment Profile Management

- The system shall allow users to create and manage profiles for each apartment, linking to lease agreements and expat details.

BR-EAM-02: Maintenance Cost Tracking

- The system shall track all maintenance expenses, including:
  - Description of the work, service provider, and costs.
  - Maintenance types (e.g., repairs, cleaning).

BR-EAM-03: Bill Upload and Storage

- The system shall allow users to upload maintenance bills and receipts in various formats (PDF, Word, Images).
  - Each bill will be linked to the corresponding maintenance record.

BR-EAM-04: Maintenance History Tracking

- The system shall maintain a log of all maintenance work, including:
  - Date, service provider, work description, and cost.
  - Attachments (e.g., bills, receipts).

BR-EAM-05: Generate Summary Reports

- The system shall provide summary reports, including:

    - Total maintenance costs for each apartment.
    - Maintenance history, including work types, costs, and service providers.

BR-EAM-06: Document Management and Versioning

- The system shall allow document versioning for all maintenance-related documents (e.g., bills, invoices).
    - Documents must be stored securely and linked to the relevant apartment record.

7. User Roles and Permissions

- **Admin**: Configures system settings, manages user roles, and generates reports.
- **Maintenance Coordinator**: Enters apartment profiles, updates maintenance work, and uploads bills.
- **Manager**: Reviews maintenance records, approves bills, and generates reports.
- **Viewer**: Views apartment profiles, maintenance history, and reports but cannot make changes.

8. Data Requirements

- **Apartment Profile Data**: Apartment location, lease agreement details, assigned expat.
- **Maintenance Data**: Type of work, service provider details, cost, work description.
- **Bill Data**: Bill name, amount, date of receipt, attached documents.
- **Historical Data**: Past maintenance work, including descriptions and total expenses.

9. Business Rules

- **BR-EAM-01**: Each maintenance task must be linked to a specific apartment and documented with relevant details (cost, service provider, description).
- **BR-EAM-02**: All bills must be uploaded and linked to the corresponding maintenance task.
- **BR-EAM-03**: Reports must include total maintenance costs, historical tasks, and cost breakdowns per apartment.

10. Reporting Requirements

- **Maintenance Cost Summary**: Total maintenance cost per apartment, broken down by month/year.
- **Maintenance Work History**: Detailed history of all maintenance tasks, including costs and service provider details.
- **Cost Breakdown Report**: Detailed report showing the costs for each maintenance task and apartment.

Module 08: Office Administrative Management

Scope: Monthly expense tracking (electricity, rent, service charge, courier, diesel, etc.), bill uploads, approval workflow, and monthly summary reports.

1. Purpose
The **Office Administrative Management** module aims to streamline and automate the tracking of monthly expenses for the office, including utilities, services, and operational costs. It will centralize data for ease of access, provide an approval workflow for expense management, and generate reports for cost tracking and forecasting.

2. Business Background
Currently, office expenses are managed using a combination of spreadsheets and manual entries:

- Difficulty in tracking monthly expenses.
- Lack of centralization for service bill payments (electricity, rent, courier, etc.).
- Time-consuming process for report generation and approvals.
- Potential errors in data entry and approval processes.

The **Office Administrative Management** module will automate expense tracking, improve reporting, and ensure a more structured and transparent process for handling monthly operational costs.

3. Business Objective
The objectives of the **Office Administrative Management** module are:

- **Centralize expense data**: Track all office-related expenses in a single platform.
- **Automate approval workflow**: Ensure all expense items go through an approval process before final payment.
- **Generate monthly summary reports**: Provide clear visibility into the total expenses for the office, broken down by category.
- **Improve accuracy and control**: Ensure expense categories are clearly defined, and documents are stored securely for auditing.

4. Scope

- **Expense Tracking**: Track and categorize office expenses, including electricity, rent, service charges, and other utilities.
- **Bill Upload**: Allow for uploading and linking of expense bills (PDF, Word, images).
- **Approval Workflow**: Implement an approval process for all submitted expenses, ensuring that no payment is made without verification.
- **Monthly Summary Reports**: Generate detailed monthly reports for expense analysis and budget tracking.

5. Business Process Overview

Step 1: Expense Entry

- Users will enter office-related expenses such as:
  - Electricity bill, rent, service charges, diesel, courier costs, and others.
  - Each expense item will be linked to its respective vendor, category, and payment type.

Step 2: Bill Upload and Attachment

- Bills and receipts will be uploaded as attachments and linked to the corresponding expense entry.
- Users can upload multiple documents (PDF, images) for each expense item.

Step 3: Approval Workflow

- Each expense entry will go through an approval process:
  - The system will allow designated approvers to review and approve or reject expense items.
  - Rejected items will require further clarification or adjustment before re-submission.

Step 4: Monthly Summary Reporting

- The system will generate a report that summarizes all expenses for the month:
  - Breakdown by category (e.g., electricity, rent, service charges, etc.).
  - Department-wise allocation of expenses if needed.
  - Total cost summary with comparative analysis to budget.

Step 5: Exporting Reports

- Monthly summary reports can be exported to Excel/PDF for review by management or other stakeholders.

6. Detailed Business Requirements

BR-OAM-01: Expense Tracking

- The system shall track and categorize office expenses, including:
  - Electricity bills, telephone bills, floor rent, service charges, diesel, courier, and other operational services.

BR-OAM-02: Bill Upload and Storage

- The system shall allow users to upload bills, receipts, and invoices related to each expense item.
  - Attachments should be categorized and stored securely within the system.

BR-OAM-03: Approval Workflow

- The system shall implement an approval workflow, allowing:
  - Designated approvers to review and approve/reject expense entries.
  - Notifications to relevant users upon approval or rejection.
  - Rejected items will be flagged for re-submission or review.

BR-OAM-04: Generate Monthly Reports

- The system shall generate monthly summary reports that include:
  - Total expenses by category (e.g., rent, electricity, etc.).
  - Breakdown by department (if applicable).
  - Budget comparison and analysis.

BR-OAM-05: Expense Summary Dashboard

- The system shall provide a dashboard that summarizes the current month's expenses, including:
  - A visual breakdown of total expenses by category.
  - An indication of whether the current expenses are within the budget.

BR-OAM-06: Export Reports

- The system shall allow users to export reports in Excel or PDF format for external use or distribution.

7. User Roles and Permissions

- **Admin**: Configures system settings, manages user roles, and generates all reports.
- **Expense Manager**: Enters and manages expense records, ensures approval workflows are followed.
- **Approver**: Reviews and approves/rejects expense items submitted by users.
- **Viewer**: Views reports and expense details but cannot make changes.

8. Data Requirements

- **Expense Data**: Expense category, amount, vendor details, payment status, and attached documents.
- **Bill Data**: Bill name, receipt date, amount, and document type.
- **Approval Data**: Approver details, approval/rejection status, date.

9. Business Rules

- **BR-OAM-01**: All expense entries must be approved by a designated approver before payment.
- **BR-OAM-02**: Expense categories should be predefined to ensure consistency and accurate reporting.
- **BR-OAM-03**: Reports must include detailed breakdowns by category and department where applicable.
- **BR-OAM-04**: Monthly expense reports should be available for export and review by management.

10. Reporting Requirements

- **Monthly Expense Summary**: A detailed report showing all expenses for the month, broken down by category and department.

- **Expense Comparison Report**: A comparison of actual expenses to the budget, highlighting any discrepancies.
- **Bill Status Report**: A report on the status of bills (paid, pending, approved, rejected).
